Complete Product & Pricing Reference

March 2026 · Confidential

Canada's first AI-powered health coordination platform — built to solve every problem your family doctor won't, can't, or doesn't have time to.

SECTION 1

Careby Health — Diagnostics

Four age-specific panels. Zero filler biomarkers. Every result doctor-reviewed. Bilingual NP consultation included. Results delivered through our AI-powered Longevity platform, featuring biological age tracking, trend analysis, and personalized health insights.

AI Results Platform

- Comprehensive lab result visualization and interpretation through an integrated AI platform
- Biological age scoring, calculated and updated with each annual panel
- Longitudinal tracking with year-over-year comparisons across panels
- Built-in AI insights to help translate complex lab data into actionable health recommendations

Concierge Services

- Dedicated care coordinator — same-day response and seamless coordination at every step
- Proactive appointment scheduling, referral support, and follow-ups
- Personalized health navigation tailored to each member
- Bilingual support — Mandarin, Cantonese, English

TIER 1 · AGES 25–45 · ENTRY PRODUCT

The Essentialist

$399 / year

~45 biomarkers ·

The lowest-friction entry point in the Careby product line. A complete, doctor-reviewed blood panel built specifically for adults 25–45 — no filler markers added to inflate the count. Every marker chosen for clinical relevance to this age group and risk profile- **do not include**

Complete Blood Count (CBC)

- Red blood cells, white blood cells, hemoglobin, hematocrit, platelets
- MCV, MCH, MCHC, RDW — detailed red cell indices

Baseline picture of immune health, anemia risk, infection response, and blood oxygen capacity.

Metabolic Panel

- Glucose (fasting), HbA1c, insulin

Blood sugar regulation and diabetes risk. HbA1c catches 3-month average glucose trends your doctor's annual visit misses.

Heart Health

- ApoB — superior cardiovascular risk marker; most panels don't include it
- LDL cholesterol, HDL cholesterol, total cholesterol, triglycerides, non-HDL cholesterol

Cardiovascular risk profiling beyond the standard lipid panel. ApoB is the most predictive single marker for atherosclerosis risk.

Organ Function

- Kidney: Creatinine, eGFR
- Liver: ALT, AST, GGT, bilirubin, albumin, total protein

Thyroid

- TSH — thyroid stimulating hormone, foundational screen for hypo/hyperthyroidism

Iron & Nutrients

- Ferritin, serum iron, TIBC, Vitamin D (25-OH)

Inflammation

- CRP (C-reactive protein) — general inflammation marker

Infectious Disease

- Hepatitis B surface antigen (HBsAg)
- Hepatitis B surface antibody (anti-HBs)
- Hepatitis B core antibody (anti-HBc)

Included with Every Tier

- Blood draw
- Doctor-reviewed — physician reads your full panel, not just flags abnormals
- Comprehensive lab result visualization and interpretation through an integrated AI platform
- Built-in AI insights to help translate complex lab data into actionable health recommendations
- Bilingual NP consultation — results explained in Mandarin, Cantonese, or English
- Personalized action plan — tells you what to do next, not just what the numbers are

---

TIER 2 · AGES 45–60

Longevity Audit

$699 / year

~80 biomarkers · Everything in Essentialist, plus:

Advanced Cardiovascular

- Lp(a) — lipoprotein(a), a genetically determined cardiovascular risk marker most doctors never order
- LDL particle size — small dense LDL is 3× more atherogenic than standard LDL
- ApoA1 — protective lipoprotein, HDL functionality marker
- Homocysteine — elevated levels linked to heart disease, stroke, and cognitive decline

Full Hormone Panel

- Total testosterone, free testosterone, SHBG (sex hormone binding globulin)
- Estradiol, DHEA-S, cortisol (AM)

Hormonal drivers of energy, body composition, mood, libido, and metabolic function. Clinically significant changes begin in the 45–60 window — this panel catches them.

Advanced Inflammation

- hs-CRP (high-sensitivity C-reactive protein) — more sensitive than standard CRP; predictive of cardiovascular events years in advance
- Fibrinogen — clotting protein; elevated levels linked to chronic inflammation and thrombosis risk

Expanded Metabolic

- Fasting insulin + HOMA-IR (insulin resistance index) — catches insulin resistance and pre-diabetes years before HbA1c flags it
- Uric acid — metabolic syndrome marker; gout risk

Expanded Thyroid

- Free T3, Free T4, TSH — full thyroid function picture beyond the basic TSH screen

Vitamins & Minerals

- Vitamin B12, folate, magnesium, zinc

TIER 3 · AGES 60+ · FEATURED

Vitality 60+

$999 / year

~105 biomarkers · Everything in Longevity Audit, plus senior-specific markers:

Superior Kidney Function

- Cystatin C — more accurate kidney function marker for seniors

Standard creatinine-based eGFR systematically overestimates kidney function in older adults. Cystatin C catches early decline that standard panels miss — clinically significant because kidney function affects medication dosing, cardiovascular risk, and dialysis planning.

Frailty & Nutritional Status

- Prealbumin (transthyretin) — more sensitive than albumin for detecting nutritional decline and frailty onset

- Albumin — retested at senior-specific thresholds

Prealbumin drops 2–4 weeks before clinical frailty becomes visible. Catching it here means intervention while there's still time.

Bone Health Panel

- Vitamin D (25-OH), calcium (serum), phosphate
- PTH (parathyroid hormone), alkaline phosphatase

Bone density and fracture risk indicators. Falls are the leading cause of injury death in Canadian seniors over 65.

Cognitive & Neurological Risk

- Vitamin B12 (elevated threshold for seniors)
- Folate, homocysteine

B12 deficiency and elevated homocysteine are strongly linked to cognitive decline. Both are prevalent and underdiagnosed in older Chinese-Canadian adults.

Cardiac Stress

- NT-proBNP — cardiac stress marker; early heart failure detection before symptoms appear

Expanded Inflammatory

- ESR (erythrocyte sedimentation rate), fibrinogen

★ Imaging Add-On — From $299

Available through Dr. Jerry Leung, private diagnostic imaging. These are tests your family doctor won't order until something is already wrong. Private access means no referral, no wait, no guessing**-do not include yet still in the works of confirming**

- Abdominal ultrasound
- Carotid artery scan (intima-media thickness, plaque detection)
- DEXA bone density scan
- Pelvic ultrasound (women) / Prostate ultrasound (men)
- Vascular flow studies
- Chest X-ray

TIER 4 · ALL AGES · EXECUTIVE / HNW / CONCIERGE

Careby Infinity

$2,499 / year

150+ biomarkers · Everything in Vitality 60+, plus:

Advanced Cancer Screening Markers

- PSA (prostate-specific antigen) — men
- CA-125 (ovarian marker) — women

- CEA — colorectal cancer marker
- AFP (alpha-fetoprotein) — liver/hepatocellular; elevated priority given HBV history
- CA 19-9 — pancreatic cancer marker

Heavy Metals & Environmental Toxins

- Lead, mercury, arsenic, cadmium

Elevated exposure risk in certain occupational and geographic profiles.

Advanced Hormonal

- IGF-1 (growth hormone proxy) — key longevity marker
- Prolactin, LH, FSH

Gut & Microbiome Markers

- Calprotectin — intestinal inflammation marker
- H. pylori antibodies — stomach cancer and ulcer risk; higher prevalence in Chinese-Canadian adults

Cardiovascular Deep Dive

- Oxidized LDL — more predictive than standard LDL for arterial damage
- MPO (myeloperoxidase) — arterial inflammation marker
- PLAC test (Lp-PLA2) — plaque vulnerability assessment

★ Full Imaging Suite-still editing and confirming

All Vitality 60+ imaging options, plus:

- ECG (12-lead)
- Echocardiogram — heart structure and function
- Mammogram — women
- Full abdominal + pelvic ultrasound

Concierge Services

- Dedicated care coordinator — same-day response, priority access
- Annual dietitian consultation + personalized nutrition plan-still confirming
- Priority booking across all Careby services

SECTION 2

Careby Home — In-Home Care Plans

Vetted, culturally matched caregivers sent to your family's door. Background checked, reference checked, data-briefed before their first visit. Replacement guarantee — no questions asked.

MONTHLY PLAN · MOST POPULAR

Independent Living

$1,499 / month

12 credits/month· Best for seniors living at home

Built for seniors who want to stay at home — safely, comfortably, and with family peace of mind. Your parent gets consistent, vetted care from someone who speaks their language and knows their history. You stop worrying about what's happening when you're not there.

- Dedicated bilingual PSW — same caregiver, consistent visits
- 12 Careby Home credits per month, usable across any home service
- Benefits navigation — we find and activate every government and insurance benefit your parent is entitled to
- GoToDoctor virtual physician access — rapid consultations for urgent health concerns, helping reduce specialist referral wait times
- Cultural and language matching — Mandarin, Cantonese, English
- Replacement guarantee

SECTION 3

Careby Home — Flexible Credit Packages

Credits are interchangeable across all Careby Home services and expire 2 years from purchase. Use for PSW visits, companion, nutritionist, hospital accompaniment, therapy, cleaning — whatever your family needs.

Essential	★ Balanced	Premium

Professional Cleaning	1 hour	1 credit	$60
Translation / Interpretation	1 hour	1 credit	$60

SECTION 4

Careby Home- Healthy Living Companion Plan

$329/mo- 2 visits/month · 2 hrs per visit

The same familiar faces, every month. Not a drop-in service. A routine.

Careby Companion sends two types of vetted specialists to your parent's door on a recurring schedule — so the people who show up aren't strangers, they're expected.

The Exercise Companion guides your senior through movements built for their ability — mobility, strength, balance. They show up, they do it with them, and they make it a habit.

The Nutrition Companion cooks a healthy meal with your parent, reviews what's in the pantry, and makes gradual improvements under the guidance of a registered dietician — swapping out the wrong oils, reducing sodium, building better eating patterns over time without turning your parent's kitchen into a clinic.

This service is for families who want to make sure mom and dad are actually moving and eating well — but can't always be there to make it happen. Careby Companion builds it into their month so you don't have to wonder.

What Every Companion Visit Includes

- Same companion every visit — relationship builds over time
- Pre-visit data review: gait trends, biomarkers, visit history if applicable
- Healthy behaviours together: exercise, cooking, walks, social outings
- Post-visit log to care coordinator and family

SECTION 6

Careby Complete — Family Health Hub

Family Health Hub

$2,499 / year

Up to 6 people: 2 seniors + 2 adults + 2 kids ·

One plan that coordinates your whole household's health. Blood diagnostics for the seniors. Virtual doctor access for the adults. Gait monitoring for fall prevention. Service credits already loaded. One coordinator who knows everyone.

- 100-biomarker blood panels 2×/year for both seniors
- GoToDoctor unlimited telehealth for up to 4 members
- 4 Careby Home service credits included
- Dedicated bilingual care coordinator
- Monthly family health summary report
- Priority booking across all Careby services

SECTION 7

Careby Corporate — Workforce Wellness

For employers who understand that an employee who gets sick has to spend hours and potentially days scheduling care, waiting in the hospital, and returning back to work. Careby Workforce Wellness gives your team proactive virtual physician care, reduced time for specialists, and quarterly employee wellness check ins.

ENHANCED TIER

Workforce Wellness+

$12 / employee / month

201+ employees ·

- GoToDoctor virtual physician access with coordinated specialist referrals to reduce wait times
- Quarterly workforce culture coaching and employee check ins
- Benefits navigation support
- PHIPA compliant
